LU832	Lufthansa	CDG	Paris	MAD	Madrid	20140612	Business	LU83220140612B25	270

Content Based Router

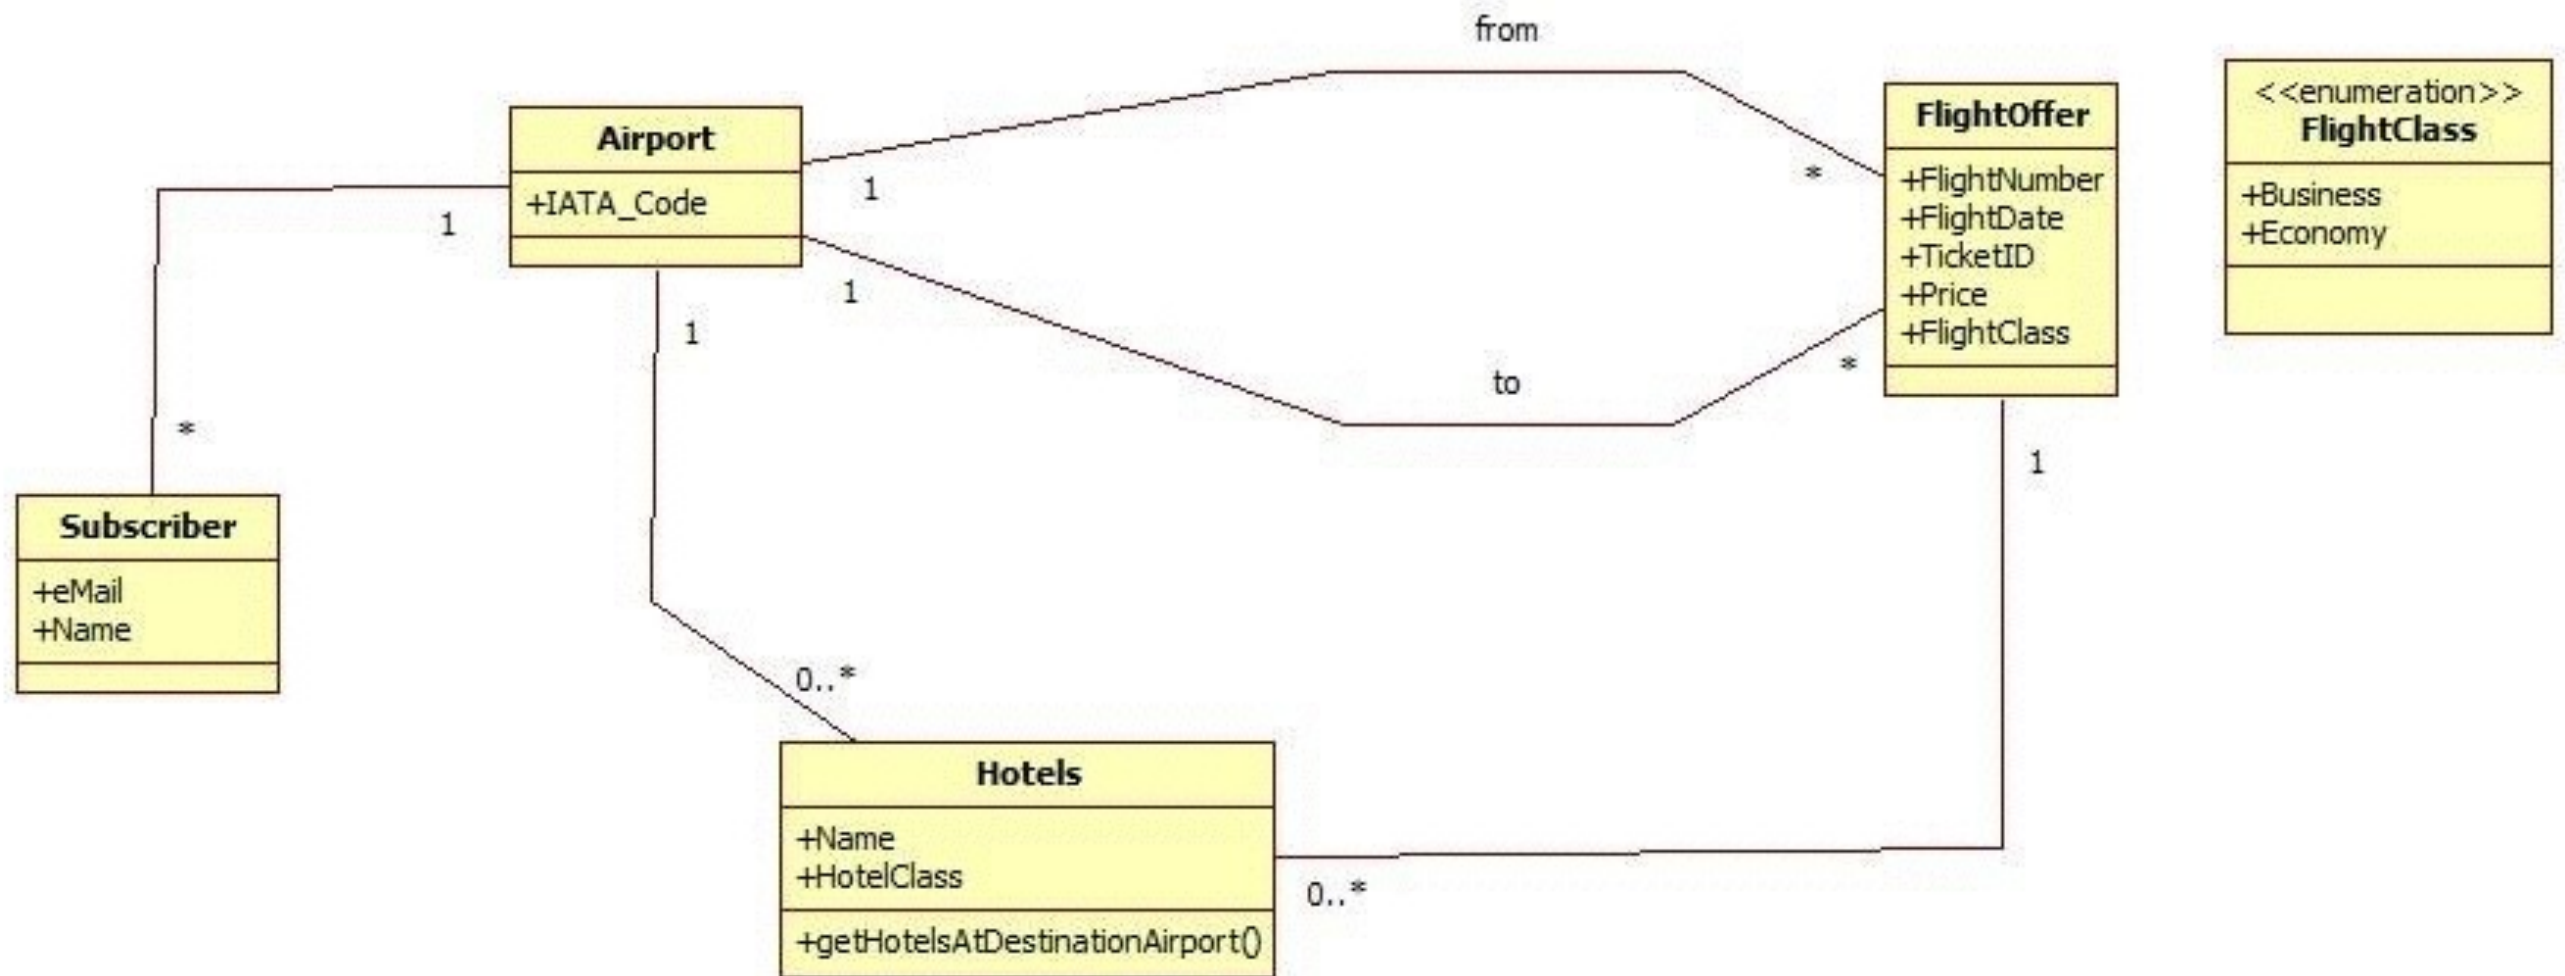

- CBR routes received file based on its extension
- Messages are transformed into XML structure
- “Offers” queue contains XML messages only
- Non-Supported file formats routed into “BadMessage”

Offer Processing

- Filter out Non-European airports
- Enrich with hotels from current airport destination
- Archive the data to database

H2 DB - Hibernate

Messages at its final stage...

```
1 <?xml version="1.0" encoding="UTF-8"?>
2 <Flight>
3   <FlightNumber>LU832</FlightNumber>
4   <AirCompany>Lufthansa</AirCompany>
5   <IATACodeOrigin>CDG</IATACodeOrigin>
6   <NameOrigin>Paris</NameOrigin>
7   <IATACodeDestination>MAD</IATACodeDestination>

12  <Price>270</Price>
13  <HotelsList>
14    <Hotel>
15      <NameOfHotel>Hitlon</NameOfHotel>
16      <starsNumber>5</starsNumber>
17    </Hotel>
18    <Hotel>
19      <NameOfHotel>Emirates</NameOfHotel>
20      <starsNumber>7</starsNumber>
21    </Hotel>
22  </HotelsList>
23 </Flight>
```

EIP-Processors-Components

What has been done so far:

- ✓ Polling Consumer (FTP, HTTP, eMail)
- ✓ Validator (German special characters)
- ✓ Message Translator (JSON2XML, CSV2XML)
- ✓ Message Endpoint (ActiveMQ, Hazelcast)
- ✓ Splitter (Email Attachments, SplittOffers)
- ✓ Content Filter (Filter out Non-EU airports)
- ✓ Content Enricher (enrich with Hotels from DB)
- ✓ WireTap (store enriched messages)

EIP-Processors-Components

What has to be done:

- ▶ Message Aggregator (Departure Aggregation)
- ▶ Message Enricher (SubscriberList)
- ▶ Message Translator (HTML Template)
- ▶ Message Endpoints (Facebook, Twitter, Mail)
- ▶ Message Sort (based on Price)
- ▶ Message Filter (best2offers)
- ▶ Multicast

Our Goal until IR2...
